

**Ex No: 10                      Creation of VHD on Windows and restoring on different host****22/09/25****AIM:**

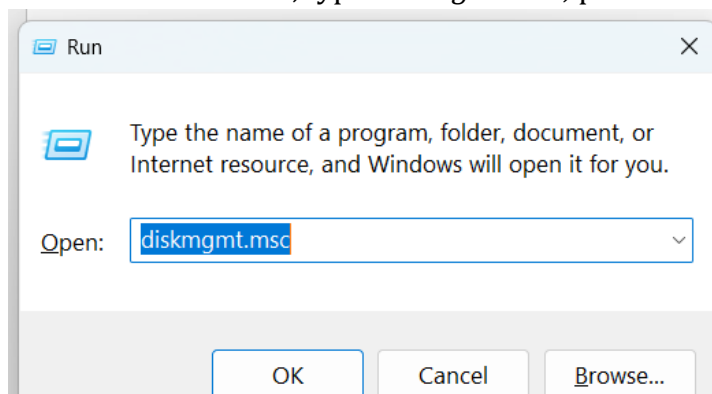

To create a VHD on Windows and restore it on a different host.

**THEORY:**

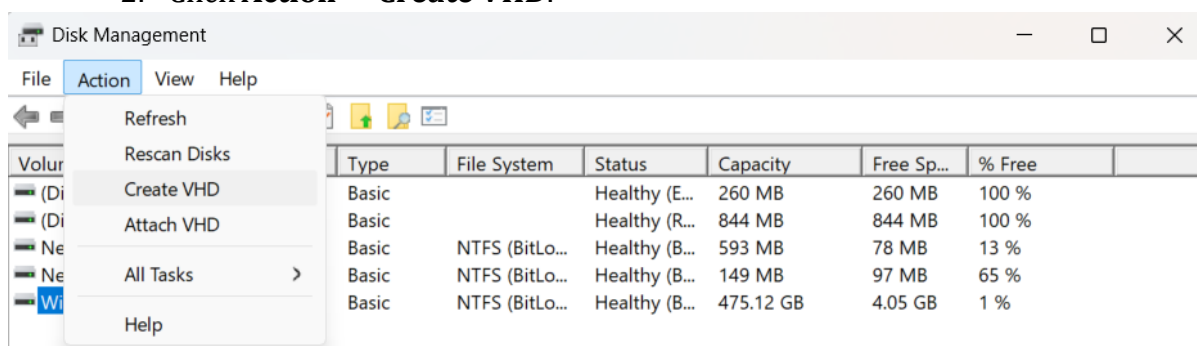

- VHD (Virtual Hard Disk) is a file that emulates a physical hard disk.
- It can store entire file systems, partitions, and data like a real disk.
- Used for virtual machines, backups, and testing environments.
- Can be mounted on Windows to access data without a VM.
- Supports portability: a VHD created on one host can be restored on another.
- Two types: VHD (older,  $\leq 2$  TB) and VHDX (newer,  $\geq 2$  TB, more resilient).
- Can be dynamic (grows as used) or fixed (preallocated size).

**PROCEDURE:****Step 1: Creating a VHD**

1. Press Win + R, type *diskmgmt.msc*, press Enter.

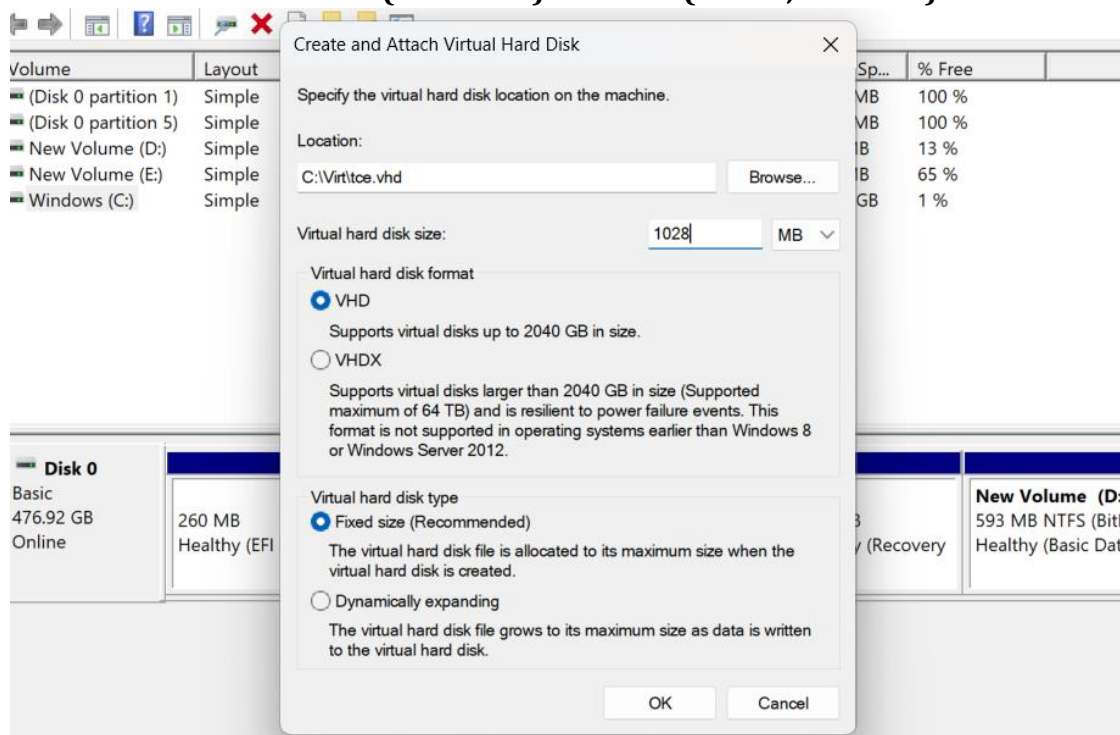

2. Click **Action** → **Create VHD**.

3. In the dialog:

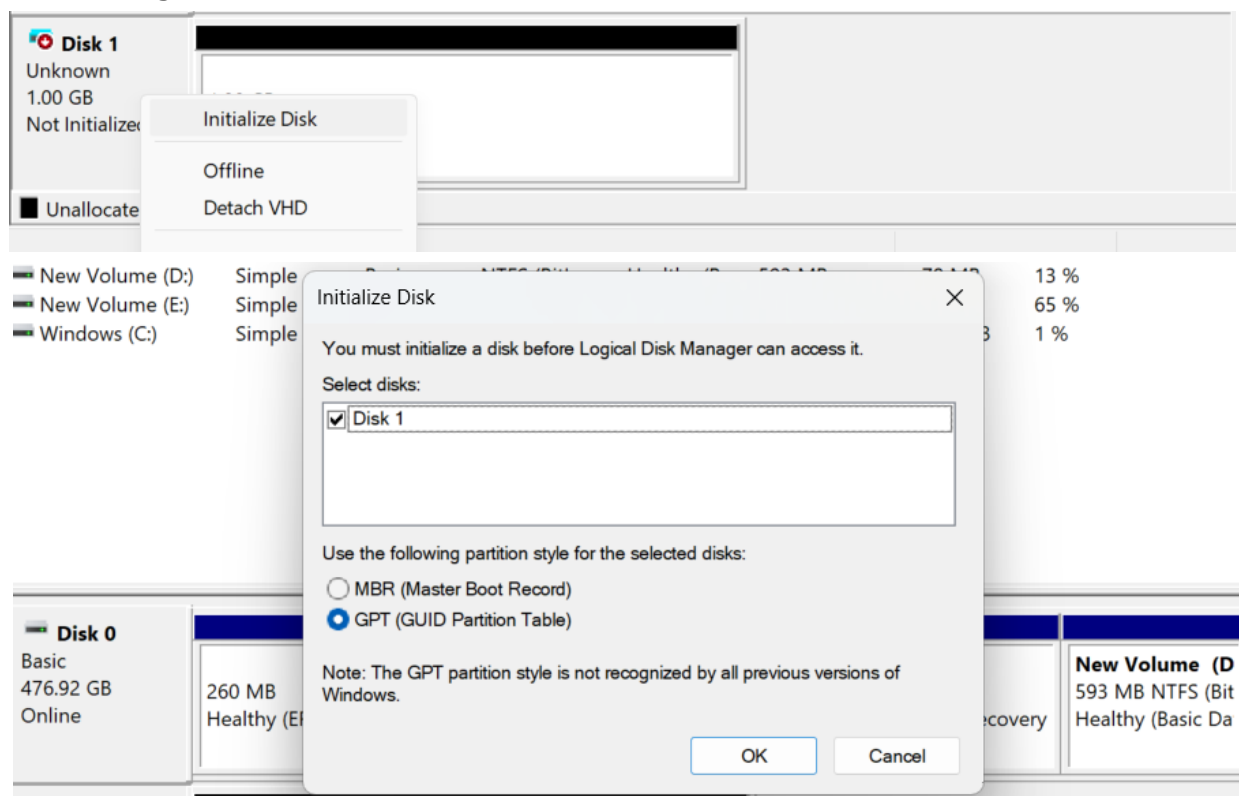

- Specify **location** to save the .vhd file.
- Specify **size** (e.g., 1024 MB).
- Choose **VHD (fixed size)** or **VHDX (better, resilient)**.

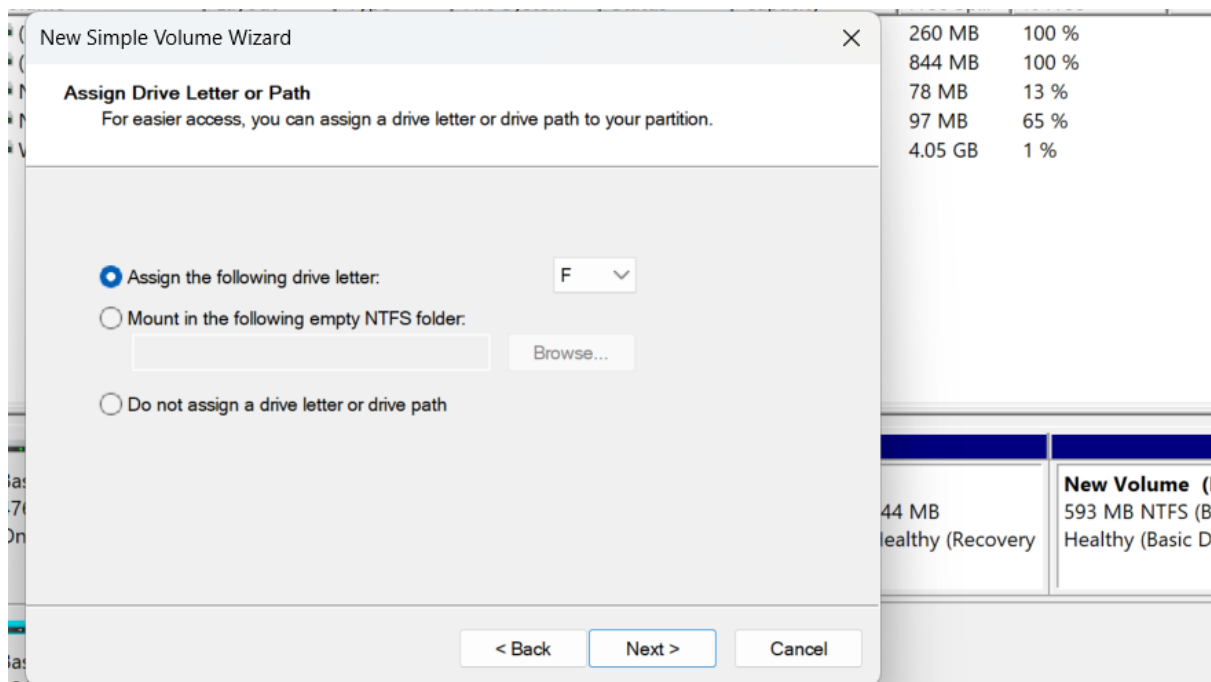

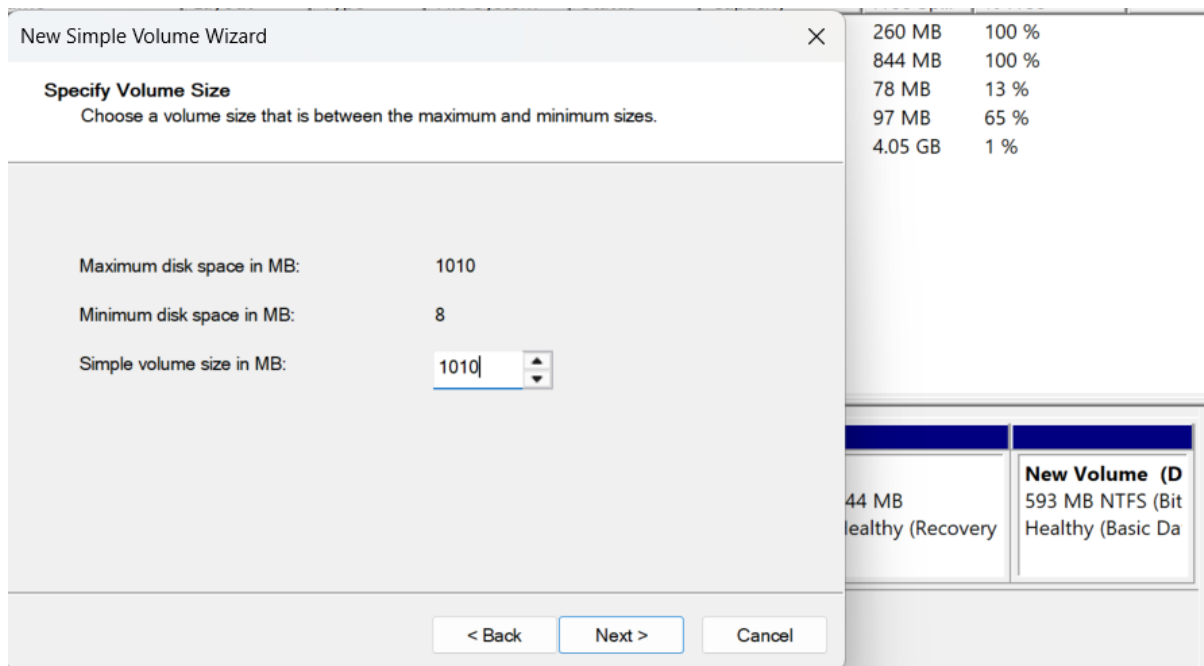

4. Click **OK**.

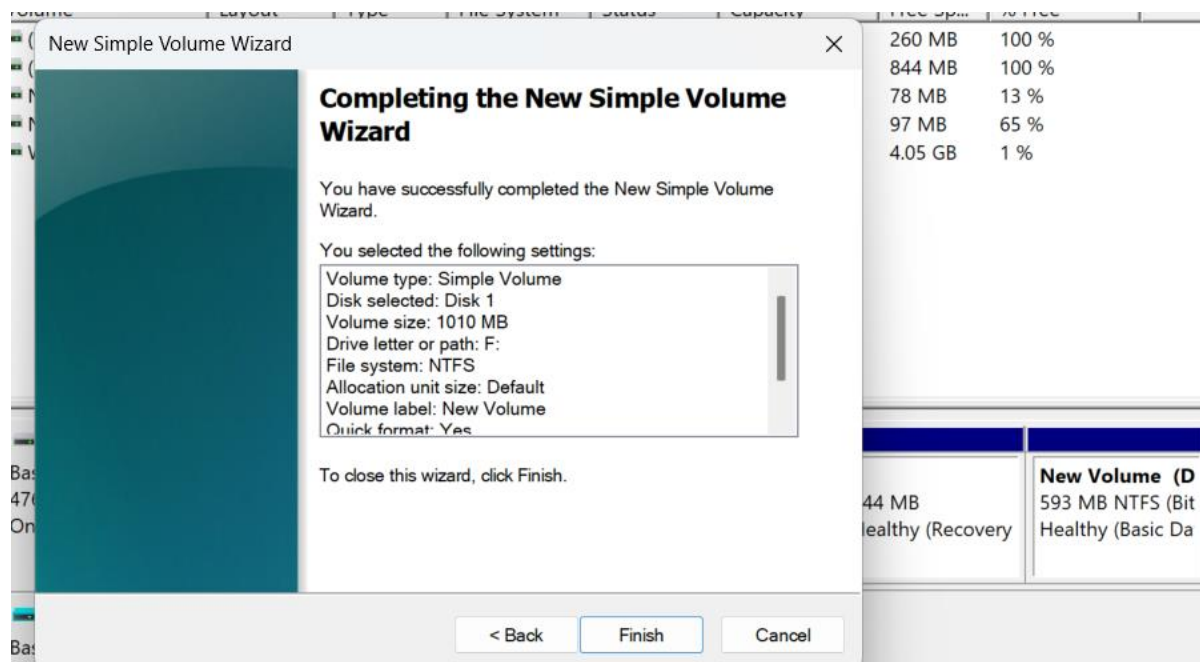

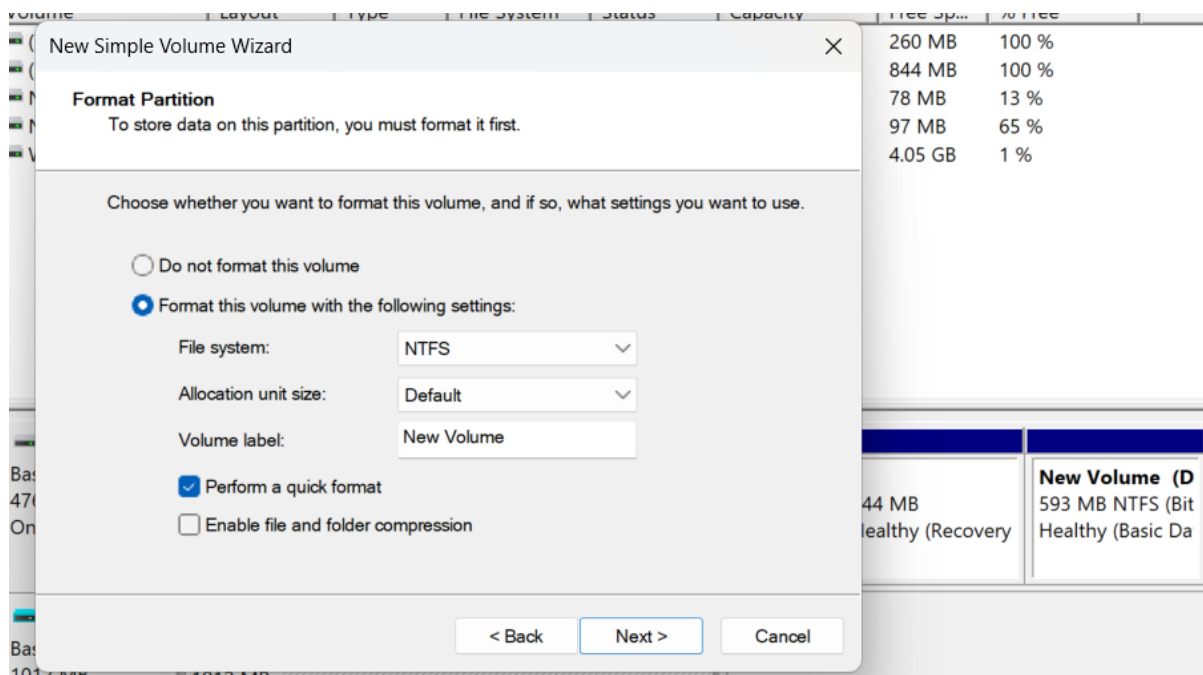

5. The VHD appears as an uninitialized disk.

6. Right-click the new disk → **Initialize Disk** → choose GPT or MBR.

7. Right-click unallocated space → **New Simple Volume** → assign drive letter → format as NTFS.

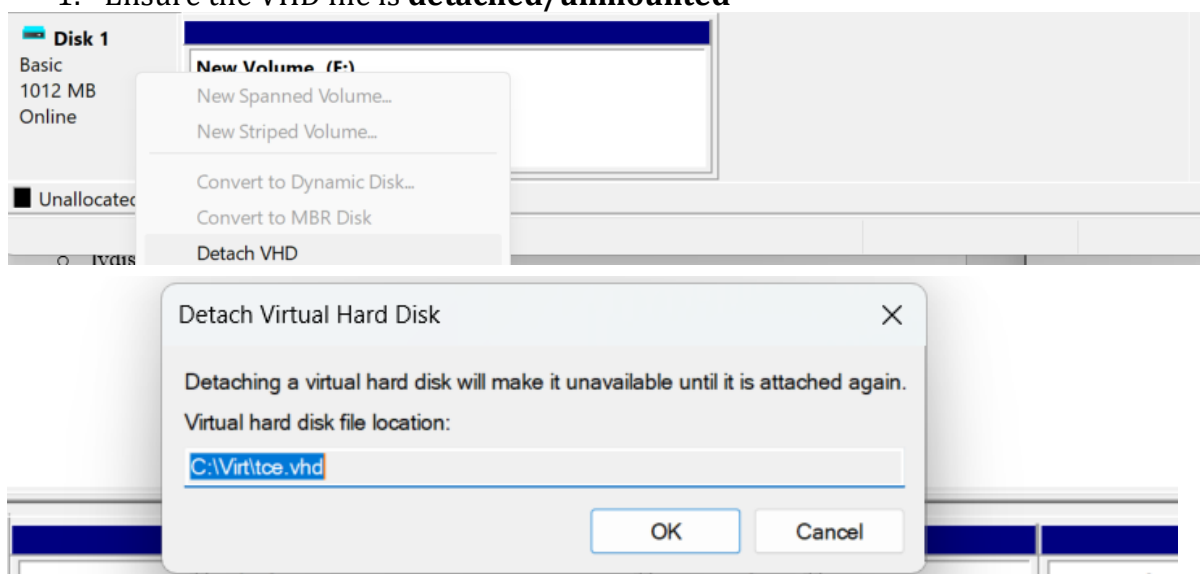

Disk Management							
File Action View Help							
Volume	Layout	Type	File System	Status	Capacity	Free Sp...	% Free
(Disk 0 partition 1)	Simple	Basic		Healthy (E...	260 MB	260 MB	100 %
(Disk 0 partition 5)	Simple	Basic		Healthy (R...	844 MB	844 MB	100 %
New Volume (D:)	Simple	Basic	NTFS (BitLo...	Healthy (B...	593 MB	78 MB	13 %
New Volume (E:)	Simple	Basic	NTFS (BitLo...	Healthy (B...	149 MB	97 MB	65 %
New Volume (F:)	Simple	Basic	NTFS	Healthy (B...	1010 MB	995 MB	99 %
Windows (C:)	Simple	Basic	NTFS (BitLo...	Healthy (B...	475.12 GB	4.05 GB	1 %

Now your VHD is ready and can be used like a normal drive.

## Step 2: Copying the VHD to Another Host

1. Ensure the VHD file is **detached/unmounted**

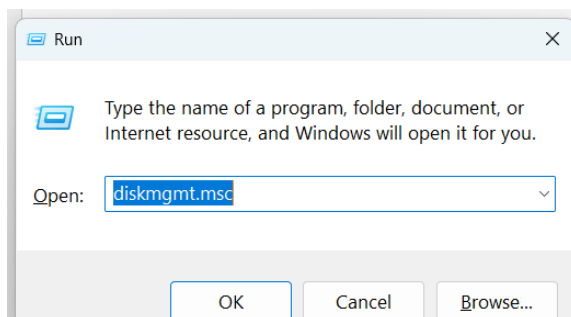

2. Copy the .vhdx (or .vhd) file to the destination host via:  
External USB / Network share / Cloud storage

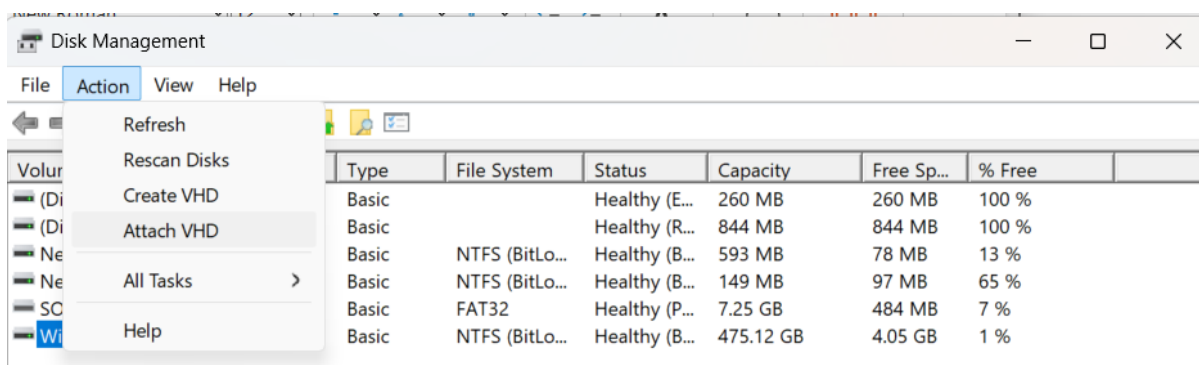

### Step 3: Restoring / Mounting the VHD on a Different Host

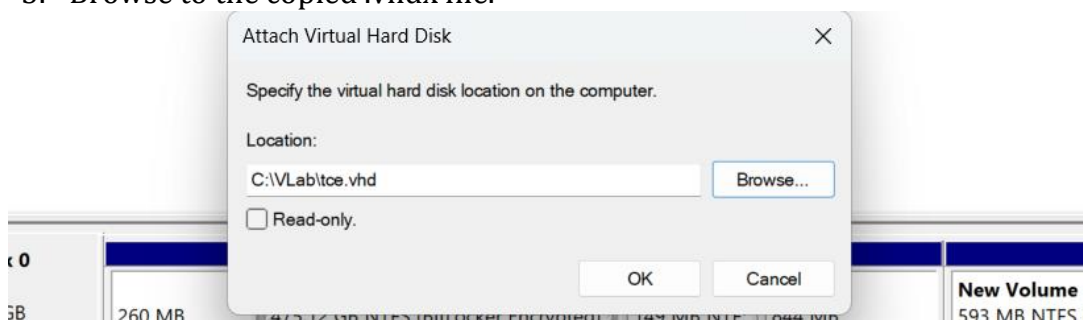

1. On the destination host, open **Disk Management** (diskmgmt.msc).

2. Click **Action** → **Attach VHD**.

3. Browse to the copied .vhdx file.

4. The VHD will appear as a new drive with the same data.

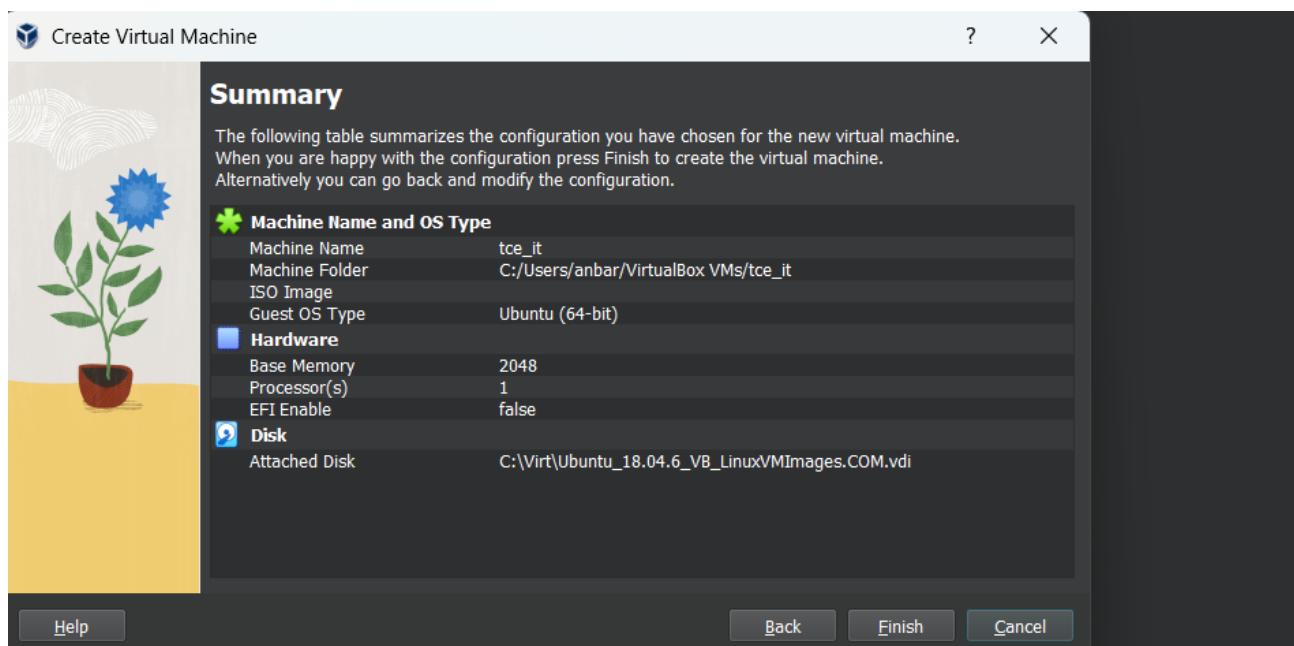

## Storage Virtualization

### Step 1: Create a VM and Add Additional Storage

#### ➤ Create a Linux VM

- Open **VirtualBox** → Click **New** → Enter VM Name, Type = Linux, Version = ubuntu.
- Allocate **RAM** (e.g., 2–4 GB).
- **Hard Disk**: Select “**Use an existing virtual hard disk file**”.
- Browse and select your **VDI file**.
- Click **Finish**.

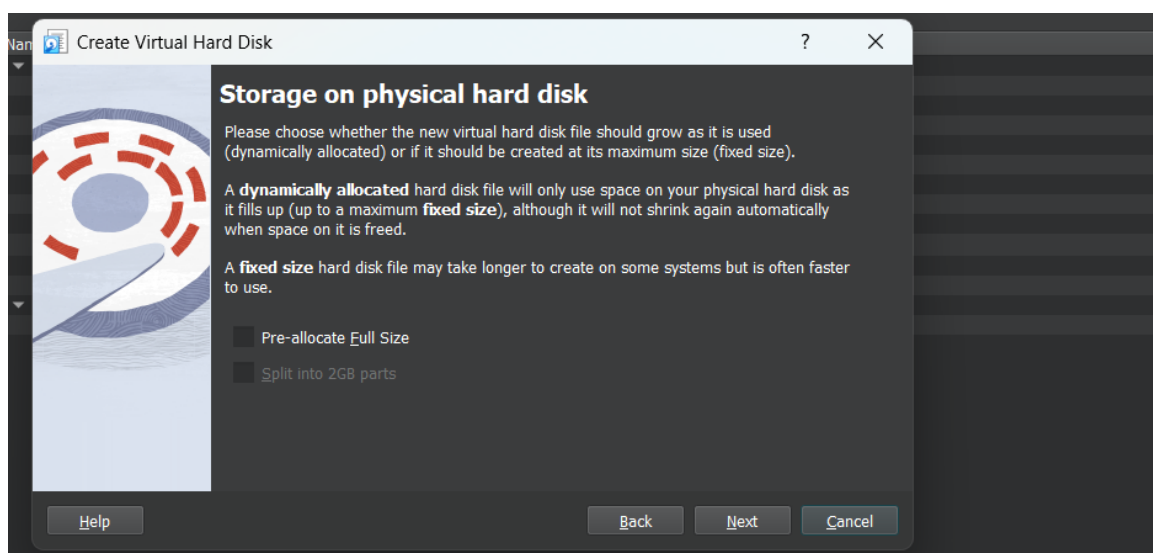

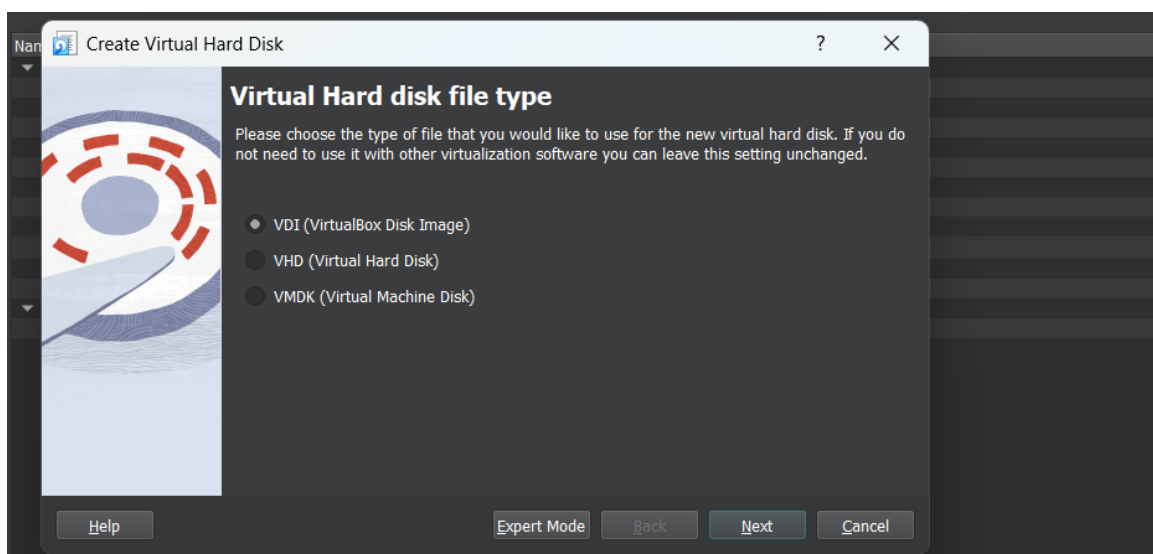

#### ➤ Add an Additional Virtual Disk

- This disk will be used for extending storage via LVM.
- In **VirtualBox**:
  1. Select the VM → **Settings** → **Storage**.
  2. Click the **Controller: SATA** → **Add Hard Disk** → **Create New Disk**.

3. Choose **VDI (VirtualBox Disk Image)**, **Dynamically allocated**, size = 7 GB.

4. Click **Finish**.

## Step 2: Start the VM and Login as Root

```
ubuntu@ubuntu1804:~$ sudo -s
```

## Step 3: Check Existing Disks and LVM

*# List all disks*

`fdisk -l`

```
root@ubuntu1804:~# fdisk -l
Disk /dev/loop0: 2.5 MiB, 2621440 bytes, 5120 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk /dev/loop1: 65.1 MiB, 68259840 bytes, 133320 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk /dev/loop2: 61.8 MiB, 64770048 bytes, 126504 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes

Disk /dev/sda: 512 GiB, 549755813888 bytes, 1073741824 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disklabel type: dos
Disk identifier: 0x67451bf8

Device      Boot Start          End      Sectors  Size Id Type
/dev/sda1   *      2048 1073739775 1073737728   512G 8e Linux LVM

Disk /dev/sdb: 7 GiB, 7516192768 bytes, 14680064 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
```

*# List physical volumes*

pvdisplay

```
root@ubuntu1804:~# pvdisplay
--- Physical volume ---
PV Name                /dev/sda1
VG Name                ubuntu-vg
PV Size                <512.00 GiB / not usable 2.00 MiB
Allocatable            yes (but full)
PE Size                4.00 MiB
Total PE               131071
Free PE                0
Allocated PE           131071
PV UUID                3F4Ims-mipI-J39Z-Lt6e-d2dv-a2Fz-wUzClD
```

*# List volume groups*

vgdisplay

```
root@ubuntu1804:~# vgdisplay
--- Volume group ---
VG Name                ubuntu-vg
System ID
Format                lvm2
Metadata Areas         1
Metadata Sequence No   3
VG Access               read/write
VG Status               resizable
MAX LV                 0
Cur LV                 2
Open LV                 2
Max PV                 0
Cur PV                 1
Act PV                 1
VG Size                <512.00 GiB
PE Size                4.00 MiB
Total PE               131071
Alloc PE / Size        131071 / <512.00 GiB
Free PE / Size          0 / 0

```

*# List logical volumes*

lvdisplay

```
root@ubuntu1804:~# lvdisplay
--- Logical volume ---
LV Path                /dev/ubuntu-vg/root
LV Name                root
VG Name                ubuntu-vg
LV UUID                gDvWb8-E4oV-ogjV-UDT7-wx2V-gbCk-Z0FRjv
LV Write Access         read/write
LV Creation host, time  ubuntu, 2022-03-07 23:20:07 -0500
LV Status                available
# open                  1
LV Size                 <511.04 GiB
Current LE              130826
Segments                1
Allocation              inherit
Read ahead sectors      auto
- currently set to      256
Block device            253:0
```

```

--- Logical volume ---
LV Path                /dev/ubuntu-vg/swap_1
LV Name                 swap_1
VG Name                 ubuntu-vg
LV UUID                 PL8auK-uz9c-Wzlf-mCYt-Xcni-SLki-7qcjWu
LV Write Access         read/write
LV Creation host, time  ubuntu, 2022-03-07 23:20:07 -0500
LV Status                available
# open                   2
LV Size                 980.00 MiB
Current LE               245
Segments                 1
Allocation               inherit
Read ahead sectors       auto
- currently set to       256
Block device             253:1

```

#### Step 4: Create Physical Volume

`pvcreate /dev/sdb`

```

root@ubuntu1804:~# pvcreate /dev/sdb
Physical volume "/dev/sdb" successfully created.

```

Initializes the new disk for LVM.

#### Step 5: Extend the Volume Group

`vgextend ubuntu-vg /dev/sdb`

```

root@ubuntu1804:~# vgextend ubuntu-vg /dev/sdb
Volume group "ubuntu-vg" successfully extended

```

Replace cloud-vg with your existing Volume Group name.

This adds the new PV to your VG.

#### Step 6: Extend the Logical Volume (Root)

`lvresize --size +3G /dev/ubuntu-vg/root`

- +3G → amount of space to add
- /dev/cloud-vg/root → your logical volume

```

root@ubuntu1804:~# lvresize --size +3G /dev/ubuntu-vg/root
Size of logical volume ubuntu-vg/root changed from <511.04 GiB (130826 extents) to <514.04 GiB (131594 extents).
Logical volume ubuntu-vg/root successfully resized.

```

Alternative:

`lvextend -L +3G /dev/ubuntu-vg/root`

#### Step 7: Check Current Disk Usage

`df -h`

Shows current available space on /.

```

root@ubuntu1804:~# df -h

```

Filesystem	Size	Used	Avail	Use%	Mounted on
udev	969M	0	969M	0%	/dev
tmpfs	199M	1.6M	198M	1%	/run
/dev/mapper/ubuntu--vg-root	503G	5.9G	471G	2%	/
tmpfs	994M	0	994M	0%	/dev/shm
tmpfs	5.0M	4.0K	5.0M	1%	/run/lock
tmpfs	994M	0	994M	0%	/sys/fs/cgroup
/dev/loop0	2.5M	2.5M	0	100%	/snap/gnome-system-monitor/163
/dev/loop3	768K	768K	0	100%	/snap/gnome-characters/741
/dev/loop1	66M	66M	0	100%	/snap/gtk-common-themes/1515

```

/dev/loop2      62M   62M   0 100% /snap/core20/1081
/dev/loop4      219M  219M   0 100% /snap/gnome-3-34-1804/77
/dev/loop6      2.5M  2.5M   0 100% /snap/gnome-calculator/884
/dev/loop7      640K  640K   0 100% /snap/gnome-logs/106
/dev/loop8      56M   56M   0 100% /snap/core18/2284
/dev/loop9      242M  242M   0 100% /snap/gnome-3-38-2004/70
/dev/loop10     219M  219M   0 100% /snap/gnome-3-34-1804/72
/dev/loop12     128K  128K   0 100% /snap/bare/5
/dev/loop11     249M  249M   0 100% /snap/gnome-3-38-2004/99
/dev/loop13     2.7M  2.7M   0 100% /snap/gnome-system-monitor/174
/dev/loop14     2.7M  2.7M   0 100% /snap/gnome-calculator/920
/dev/loop15     44M   44M   0 100% /snap/snapd/14978
/dev/loop16     66M   66M   0 100% /snap/gtk-common-themes/1519
/dev/loop17     62M   62M   0 100% /snap/core20/1361
/dev/loop18     768K  768K   0 100% /snap/gnome-characters/726
tmpfs           199M  28K   199M   1% /run/user/121
tmpfs           199M  40K   199M   1% /run/user/1000
/dev/loop19     56M   56M   0 100% /snap/core18/2952
/dev/loop20     51M   51M   0 100% /snap/snapd/25202

```

### Step 8: Resize the Filesystem

resize2fs /dev/mapper/cloud--vg-root

```

root@ubuntu1804:~# resize2fs /dev/mapper/ubuntu--vg-root
resize2fs 1.44.1 (24-Mar-2018)
Filesystem at /dev/mapper/ubuntu--vg-root is mounted on /; on-line resizing required
old_desc_blocks = 64, new_desc_blocks = 65
The filesystem on /dev/mapper/ubuntu--vg-root is now 134752256 (4k) blocks long.

```

Resizes the filesystem to use the newly added space.

### Step 9: Verify Disk Space

df -h

```

root@ubuntu1804:~# df -h
Filesystem                Size      Used Avail Use% Mounted on
udev                     969M         0 969M   0% /dev
tmpfs                    199M       1.6M  198M   1% /run
/dev/mapper/ubuntu--vg-root 505G       5.9G  474G   2% /
tmpfs                    994M         0  994M   0% /dev/shm
tmpfs                    5.0M       4.0K   5.0M   1% /run/lock
tmpfs                    994M         0  994M   0% /sys/fs/cgroup
/dev/loop0               2.5M       2.5M    0 100% /snap/gnome-system-monitor/163
/dev/loop3               768K       768K    0 100% /snap/gnome-characters/741
/dev/loop1               66M        66M    0 100% /snap/gtk-common-themes/1515
/dev/loop2               62M        62M    0 100% /snap/core20/1081
/dev/loop4               219M       219M    0 100% /snap/gnome-3-34-1804/77
/dev/loop6               2.5M       2.5M    0 100% /snap/gnome-calculator/884
/dev/loop7               640K       640K    0 100% /snap/gnome-logs/106
/dev/loop8               56M        56M    0 100% /snap/core18/2284
/dev/loop9               242M       242M    0 100% /snap/gnome-3-38-2004/70
/dev/loop10              219M       219M    0 100% /snap/gnome-3-34-1804/72
/dev/loop12              128K       128K    0 100% /snap/bare/5
/dev/loop11              249M       249M    0 100% /snap/gnome-3-38-2004/99
/dev/loop13              2.7M       2.7M    0 100% /snap/gnome-system-monitor/174
/dev/loop14              2.7M       2.7M    0 100% /snap/gnome-calculator/920
/dev/loop15              44M        44M    0 100% /snap/snapd/14978
/dev/loop16              66M        66M    0 100% /snap/gtk-common-themes/1519
/dev/loop17              62M        62M    0 100% /snap/core20/1361
/dev/loop18              768K       768K    0 100% /snap/gnome-characters/726
tmpfs                    199M       28K   199M   1% /run/user/121
tmpfs                    199M       40K   199M   1% /run/user/1000
/dev/loop19              56M        56M    0 100% /snap/core18/2952
/dev/loop20              51M        51M    0 100% /snap/snapd/25202
root@ubuntu1804:~#

```

Confirm that the root filesystem now has **additional 3 GB**.

### RESULT:

Thus, The VHD was successfully created, transferred, and mounted on another host with all data intact.
